INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/NL99/00460

Item V.

Reference is made to the following documents:

- D1: Elliott et al., J. Hyg. Camb., 1980, 85, pp.275-285
- D2: Charland et al., Microbiology, 1998, 144, pp.325-332
- D3: Kolkman et al., J. Biochem., 1998, 123, pp.937-45
- D: Smith et al., Infection and immunity, April 1999, 67, pp.1750-56.
- I) 1) D1 discloses a purified capsular polysaccharide (or antigen) from Streptococcus suis type 2 (see summary). This disclosure destroys the novelty (Article 33.2 PCT) of present claim 13.
 - 2) Said purified capsular polysaccharide (or antigen) from Streptococcus suis type 2 is used in a vaccine comprising an adjuvant (see also summary). This destroys the novelty (Article 33.2 PCT) of present claim 14.
 - 3) Document D2 discloses two Streptococcus suis type 2 mutants having a modified capsular gene cluster. These mutants are obtained by transposon (Tn916) insertion (see summary and "Molecular characterization of mutants", page 327 of D2). This destroy the novelty (Article 33.2 PCT) of present claims 15 and 16.
 - Note also that claim 16 is anticipated by any naturally occurring S. suis since the word "recombinant" does not confer any distinguishing technical feature to a microorganism and the expression "at least a part" encompasses the totality of said capsular gene cluster.
 - 4) Claim 17 being not clear ("A recombinant microorganism... comprising a lactic acid bacterium" implies that other microorganisms are contemplated by the claim), the above objections raised against claim 16 also apply to claim 17.
 - 5) No true technical feature distinguishes *a vaccine comprising a product X" from the product X itself. Following this reasoning, the subject-matter of claims 18-23 also lack novelty under Article 33.2 PCT.

INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/NL99/00460

- 6) Dependent claims 24 and 25 do not appear to contain any additional features which, in combination with the features of any claim to which they refer, meet the requirements of the EPC with respect to inventive step (Article 33.3 PCT).
- The prior art document D1 discloses the applicability of S. suis serotype 2 11) capsular antigen for vaccination and diagnostic purposes. In the light of this prior art, a problem underlying the present application can be seen in the provision of further reagents for S. suis diagnostic and vaccination purposes. The solution to this problem is the provision of polynucleotides. encoded peptides, and corresponding S. suis capsular antigen of serotype 2.

It was known in the art that in Gram-negative bacteria, but also in a number of Gram-positive bacteria, genes which are involved in the biosynthesis of capsule polysaccharides are clustered at a single locus (see the description of the present application page 8, lines 3-8, and D3, page 944, paragraph 2).

The fact that this was also the case for S. suis is confirmed by D2 which indicates that "only one transposon insertion is sufficient to alter capsular expression" (page 327, last sentence of "Molecular characterization of mutants).

Furthermore, D2 discloses 2 mutants having Tn916 insertions in the capsular gene cluster of S. suis type 2. This allows the identification and isolation of the gene cluster containing said transposon.

Thus, starting from this prior art the provision of polynucleotides, encoded peptides, and corresponding S. suis capsular antigen of serotype 2 would have been routine for the skilled person by use of classical technics in the field of molecular biology. At least the skilled person would have had a reasonable expectation of success.

Therefore, the subject-matter of present claims 1-14 lack an inventive step under Article 33.3 PCT.

- III) It seems that the use of a S. suis type 2 mutant deficient in capsular expression as a vaccine was not derivable in an obvious manner from the available prior art. Therefore, the subject matter of present claim 26 (except when this claim refers back to claim 18) and claims 27-29 fulfil the requirements of Article 33.3 PCT.
- IV) It appears that almost half of the nucleic acid encoding the capsular gene cluster

INTERNATIONAL PRELIMINARY

International application No. PCT/NL99/00460

EXAMINATION REPORT - SEPARATE SHEET

(CPS2) depicted in Fig.3 is lacking in the priority documents of the present application. Thus, the sequence of Fig.3 (or at least a part of it) does not enjoy the priority right, and document D becomes highly relevant with respect to the subjectmatter corresponding to Fig.3.

For the assessment of the present claim 26 on the question whether it is industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

Item VIII.

- It is clear from the description that the nucleic acid sequence(s) of Fig.3 is an 1) essential technical feature to the definition of the invention. Since none of the independent claims contain this feature (note that the word "preferably" in claim 4 renders this feature optional) they do not meet the requirement following from Article 6 PCT taken in combination with Rule 6.3(b) PCT that any independent claim must contain all the technical features essential to the definition of the invention.
- One subject in a population partly vaccinated can be a subject which has not been 2) vaccinated at all. Thus, the subject-matter of claims 27 and 28 encompasses embodiments which do not have the technical features of the invention (Article 6 PCT).

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/NL99/00460

- the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (specify):

 the description, claims or drawings (indicate particular elements below) or said claims Nos. are so unclear that no meaningful opinion could be formed (specify):

 the claims, or said claims Nos. are so inadequately supported by the description that no meaningful opinion could be formed.
- o international search report has been established for the said claims Nos. 5-6 (totally); 1-3, 7-29 (partially).
- V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
